ADRIAN MARQUINA

PROFILE

An innovative and versatile Software Engineer with over five years of diverse, hands-on experience across multiple industries and continents. I excel in developing high-quality, scalable software solutions and leading cross-functional teams—from freelance projects to roles in renowned organizations across the United States, Peru, Spain, and Ecuador. My technical expertise spans a broad spectrum of programming languages and frameworks, with deep proficiency in Java, C#, Laravel, and modern web technologies including Angular, React, and their associated libraries. I have successfully architected complex systems for banking, airport services, and logistics, managing large-scale infrastructure deployments—from on-site server installations at major airports in Spain to orchestrating cloud migrations using AWS, Azure, IBM Cloud, and GCP. Recognized for conceptualizing reusable software libraries and driving the adoption of reactive microservices architectures, I have consistently enhanced code quality, system efficiency, and team productivity as both a tech lead and software architect. My commitment to continuous learning is evident in my ongoing studies in Informatics Engineering and active participation in professional development initiatives, while my fluency in English and Spanish enables seamless global collaboration.

EXPERIENCE

AOS International | United States

Software Engineer & Architect | September 2023 – February 2025

- Directed a team of two architects in an English-only project for an American client, fostering a collaborative environment for high-level system design and decision-making. I oversaw all communication with the stakeholders and product owners. Ensured designs aligned seamlessly with project objectives and client needs, enhancing overall system coherence and functionality.
- Pioneered the development of a comprehensive telemetry system, managing its evolution from concept to deployment. Spearheaded the creation of client-side data collectors, data processing units, and orchestrators, demonstrating a keen eye for system integration and operational efficiency.
- Applied the C4 model and Domain-Driven Design principles to architect a system that is robust, scalable, and maintainable. Demonstrated adeptness in conceptualizing complex system architectures that accommodate future growth and adaptability.
- Showcased proficiency in Azure cloud services by architecting a sophisticated cloud-based infrastructure. Integrated a suite of Azure services including AKS, Azure Service Bus, and storage accounts, optimizing for performance and reliability. This not only enhanced system capabilities but also ensured a resilient and scalable cloud environment. I also implemented the CI/CD pipelines in GitHub actions.
- Proficient in using C#, ASP.NET 6, and .NET Core 6 for backend development. Applied MediatR for decoupling and Fluent Validator for robust validation processes. Expertly integrated Windows Metrics API and Wix Toolset for enhanced system monitoring and installation solutions.

- Employed Redis for efficient caching mechanisms, significantly improving application performance. Managed databases using SQLite and Azure RDS MySQL, ensuring data integrity and optimal performance. Implemented Quartz for advanced job scheduling and Hosted Services for background task management.
- Utilized NUnit for unit testing, ensuring high code quality and system reliability. Conducted architectural tests with ArchUnitNET, guaranteeing the integrity and compliance of the system architecture with established standards.
- Demonstrated expertise in front-end development using TypeScript, Nest, and React. Developed intuitive and responsive user interfaces, ensuring a seamless user experience. Applied custom authorization techniques for robust security and integrated Swagger and OpenAPI for comprehensive API documentation.
- Demonstrated expertise in integrating Microsoft Office 365 products using C# and VB.NET. Worked extensively with APIs and SDKs for Dynamics, PowerBI, SharePoint, PowerApps, OneDrive, Office Suite, and Active Directory. Developed solutions leveraging Azure services, ensuring seamless integration and enhanced functionality across various Microsoft platforms.
- Managed on-site server installations across multiple airports throughout Spain. Coordinated deployments with local airport teams, ensuring seamless integration and minimal disruption to operations. Demonstrated proficiency in large-scale infrastructure deployment and cross-team collaboration.

Encora | Perú

Software Engineer| February 2024 – February 2025

- Pioneered the design and development of advanced reusable software libraries, setting a new standard in code quality and efficiency. Key architect behind the strategic planning and implementation of essential business modules, significantly enhancing system robustness and operational performance.
- Mastered the application of Java 11 in crafting foundational software components, with a keen focus on maintainability, modular architecture, and clean code principles. Advanced the adoption of reactive programming paradigms with rxJava to boost application responsiveness, scalability, and system resilience.
- Directed sophisticated AWS cloud deployments, emphasizing cutting-edge security and performance optimizations. Expertly managed a comprehensive array of AWS technologies including AWS Batch, AWS Glue, AWS EKS, AWS S3, AWS MSK, AWS SQS, and AWS Elastic Cache, to name a few, delivering scalable and efficient data processing solutions. Innovatively integrated Redis for state-of-the-art caching mechanisms, DynamoDB for scalable NoSQL storage, and AWS RDS(Aurora) for advanced relational data architectures.
- Championed rigorous unit testing with JUnit, ensuring unparalleled code quality and system reliability. Utilized Maven for superior project management and automation, significantly streamlining the development process and lifecycle.
- Orchestrated cutting-edge real-time data processing and event streaming capabilities using Kafka, reinforcing a reactive microservices architecture adept at managing high-traffic environments and asynchronous data operations.
- Advocated for and implemented auto-documentation practices with tools like JavaDocs and OpenAPI, in conjunction with Maven for enhanced project management and automation, elevating REST API development to new heights of clarity and maintainability. Architected a state-of-the-art reactive microservices framework, markedly improving system modularity, scalability, and the efficient management of asynchronous data flows and high-load situations.
- Excelled in behavior-driven development (BDD) with Java Cucumber, ensuring software functionalities were perfectly aligned with business objectives. Employed Mockito for precise mock testing, enhancing test accuracy and reliability. Integrated Serenity for detailed test reporting, Kiuwan for comprehensive code security and quality assessments, and SonarQube for continuous code quality monitoring, steadfastly upholding the highest standards of coding excellence and security compliance.

Niubiz | Perú

Software Engineer & Tech Owner | August 2023 – January 2024

- Successfully led multiple project teams (5-10 members each) in developing business-critical software, enhancing team productivity and effectiveness through strong leadership and clear communication between the team, product owners and stakeholders.
- Conceptualized and developed reusable software libraries, dramatically improving code quality, and reducing development time. Played a central role in designing and implementing several key business modules, significantly contributing to the robustness and efficiency of production systems.
- Demonstrated extensive use of Java 11 in developing core software components, focusing on clean, modular code. Implemented reactive programming using rxJava, enhancing application responsiveness, scalability, and resilience.
- Managed and supervised AWS deployments with a focus on security and performance, utilizing AWS Batch, AWS Glue for large-scale data processing as other technologies such AWS EKS, AWS S3, AWS MSK, AWS SQS, AWS Elastic Cache, etc. Integrated Redis for efficient caching, DynamoDB for NoSQL data solutions, and AWS RDS(Aurora) for relational data management.
- Employed JUnit for comprehensive unit testing, supporting high code quality and reliability. Utilized Maven for effective project management and build automation, streamlining the development lifecycle.
- Orchestrated real-time data processing and event streaming using Kafka. Developed and maintained a reactive microservices architecture, ensuring efficient handling of high-load scenarios and asynchronous data streams.
- Emphasized the use of auto-documentation tools like JavaDocs and OpenAPI, alongside detailed schemas and validations to enhance REST API development and maintenance. Utilized Maven for streamlined project management and build automation, contributing to a standardized and efficient development process. Architected and implemented a reactive microservices framework, boosting system modularity and scalability, and ensuring efficient management of asynchronous data streams and high-load scenarios.
- Expertly employed Java Cucumber for behavior-driven development (BDD), ensuring that software features met business requirements. Utilized Mockito for effective mocking in unit tests, enhancing test coverage and reliability. Incorporated Serenity as a reporting library to provide clear and detailed feedback on test results. Employed Kiuwan for code security and quality analysis, ensuring adherence to coding best practices and security standards. Leveraged SonarQube for continuous inspection of code quality, facilitating the identification and resolution of issues early in the development cycle.
- Designed and maintained microservices using Laravel and PHP for specific API components, facilitating lightweight, high-performance endpoints used in telemetry and client data processing workflows. Integrated these services into a broader .NET ecosystem, demonstrating cross-language orchestration.
- Led initiatives to containerize Laravel services and deploy them using Azure Kubernetes Service (AKS), ensuring seamless scaling and robust performance. Applied best practices for RESTful API development in Laravel, including service providers, middleware, and route caching.

G&S | Perú

Software Engineer | February 2023 - September 2023

- Led the development and implementation of integrated software solutions on Windows Server 2012 and 2022 environments, utilizing SQL Server 2012 and 2019 for efficient database management in critical projects.
- Designed and developed robust applications that interacted with external APIs to extend functionality and improve interoperability between disparate systems. This integration enabled effective automation of business processes and enhanced data-driven decision-making.
- Played a key role in the migration and upgrading of legacy systems to modern Windows Server and SQL Server platforms, ensuring data compatibility and security across the organization.
- Collaborated closely with cross-functional teams to design interfaces and functionalities that met specific end-user needs, ensuring an optimized user experience aligned with business objectives.

- Offered support and maintenance for a Kotlin-based application, ensuring optimal performance and resolving technical issues to enhance user experience.
- Developed Laravel-based modules for internal business management tools, providing quick solutions for ticket tracking and document handling.
- Enhanced legacy systems by integrating modern PHP and Laravel APIs, offering improved performance and a better user experience while maintaining compatibility with SQL Server backends.
- Wrote unit and integration tests using PHPUnit, ensuring the reliability of Laravel services.

MDP S.A.C | Perú

Software Engineer & Tech Lead | February 2023 – August 2023

- Successfully led and managed a team of 10 software engineers, promoting collaboration and effective communication to drive project success. Introduced best practices such as code reviews, pair programming, and 360-degree feedback, resulting in consistently high-performance metrics that surpassed company averages.
- Played a critical role in shaping the technical direction of key projects, including complex systems such as a bank core system and an airport services management system. Contributed expertise and insights to the decision-making process, ensuring optimal solutions were implemented.
- Developed robust and scalable system architectures to meet project requirements. Leveraged technologies such as Asp.Net 6, Kotlin, Angular 15, and SQL Server to deliver seamless software performance and seamless integration with existing systems. Additionally, designed and implemented libraries that were widely adopted within the organization.
- Enhanced team productivity by streamlining workflows and optimizing application lifecycle management processes. Leveraged Azure DevOps and git as source control, enabling smoother collaboration and version control. Introduced Docker and Kubernetes to streamline application deployment and enhance scalability, resulting in improved efficiency and reliability.
- Utilized my expertise in Microsoft Office 365 integration, working extensively with APIs and SDKs for Dynamics, PowerBI, SharePoint, PowerApps, OneDrive, Office Suite, and Active Directory. Employed C# and VB.NET to develop solutions that seamlessly integrate various Microsoft platforms, enhancing functionality and user experience. This not only added value to the projects but also streamlined processes, improving overall efficiency and productivity in the organization.
- Introduced Laravel and PHP services to complement .NET-based systems, streamlining business logic for modules like user management and airport operations dashboards.
- Created modular Laravel packages for common functionality across multiple projects, improving consistency and developer productivity.
- Integrated Laravel services with Angular 15 frontends, ensuring smooth communication via RESTful APIs with standardized JSON payloads.

Software Engineer | April 2022 – January 2023

- Served on the architecture team managing a hybrid environment spanning multiple cloud providers—Azure (VMs, App Service, AKS, Azure DevOps), AWS (EC2, RDS, S3, EKS), IBM Cloud (IBM Cloud Kubernetes Service, Cloud Foundry), and GCP (Compute Engine, GKE, Cloud Storage)—along with on-premises infrastructure. Oversaw the design, configuration, and maintenance of these services to ensure high availability, performance, security, and cost efficiency of critical systems.
- Spearheaded the design and architecture of software systems, considering the entire infrastructure and component ecosystem. Played a key role in implementing internal libraries utilized by the company's banking clients and point of sale (POS) devices.
- Successfully implemented DevOps practices, establishing CI/CD pipelines, conducting stress tests, and configuring Docker and Kubernetes environments. Proactively built and mentored teams, ensuring seamless collaboration and efficient project delivery.

- Maintained and developed internal projects using Angular, Spring Boot, and ASP.Net, ensuring the continued functionality and improvement of essential software systems.
- Developed an Android application using Kotlin to provide operational features for a company servicing airline within airports, enhancing real-time communication and operational efficiency.
- Implemented PHP and Laravel-based services for lightweight backend tasks where rapid development and flexibility were key. Deployed services across hybrid environments including Azure and IBM Cloud.

Devsu | Ecuador

Software Engineer | July 2022 - August 2022

- Frontend developer for a lottery page for DoorDrash US project. Utilized Angular, Node, Postman, Git, Bitbucket, and Jira to deliver high-quality code and functionality.
- Worked closely with designers, backend developers, and DevOps teams to ensure a cohesive and consistent design across the entire system. Effectively communicated and coordinated efforts to maintain a unified user experience.
- Collaborated on Laravel backend features to support Angular frontend components in the DoorDash US project. Developed endpoints and logic for lottery-related business rules.
- Worked in an Agile team where Laravel + PHP microservices coexisted with Node.js components, ensuring robust integration and quick feature iterations.

Inty360 | Perú

Software Engineer | March 2022 - July 2022

- Acted as a full-stack developer for a construction contracts management system, utilizing Angular, Serverless, Node, JavaScript, MongoDB, Azure DevOps, Postman, Git, GitHub, and AWS to deliver a comprehensive solution.
- Played a pivotal role in designing and implementing system components based on stakeholder requirements. Actively participated in multiple meetings with stakeholders, gathering insights and feedback to ensure effective implementation and alignment with their needs.
- Built Laravel APIs for contract lifecycle management features, focusing on permissions, notifications, and data integrity.
- Optimized MongoDB interactions via Laravel Eloquent + custom drivers, blending SQL-style ORM flexibility with NoSQL document storage.
- Developed admin dashboards using Laravel Blade templating and Tailwind CSS for quick internal tools.

Freelance | Perú

Software Engineer | January 2020 - February 2022

- Engineered robust web applications in C# using ASP.NET Core, leveraging popular libraries such as Entity Framework Core, MediatR, and FluentValidation to build scalable and maintainable backend systems.
- Developed dynamic and responsive user interfaces with Angular, integrating modern UI frameworks including Tailwind CSS, Angular Material, and RxJS to enhance user experience and performance.
- Architected full-stack solutions using Java with Spring Boot for backend services and React for frontend development, ensuring seamless integration, high performance, and a responsive design across platforms.
- Collaborated directly with clients to analyze requirements, design custom solutions, and implement best practices in software development, leading to increased operational efficiency and client satisfaction.
- Implemented DevOps practices such as CI/CD pipelines, containerization with Docker, and cloud deployments, streamlining the development lifecycle and ensuring rapid, reliable releases.

MixCom | Perú

IT Administrator | January 2019 - December 2020

- Automated critical accounting, logistics, and invoicing processes by leveraging C++, WxWidgets, Boost, SQLite3, and vcpkg, resulting in improved efficiency and accuracy.

- Led the design and implementation of core systems that aligned with the company's operational and logistical processes. Developed solutions that addressed specific business needs, ensuring seamless integration and optimal performance.
- Managed and maintained enterprise-level systems developed in Java (JEE), ensuring their stability and performance. Regularly updated the systems to incorporate new business requirements and optimized workflows to enhance user experience and system responsiveness.
- Provided comprehensive support and updates for applications built on the .NET Framework 3.1, addressing technical challenges and implementing new features. Focused on improving code maintainability, system interoperability, and ensuring compliance with industry standards.

EDUCATION

European University of Madrid, Spain
Informatics Engineering – Double grade | January 2024 – December 2026
Expected Grades: 9 (10 max.)

The University of Sheffield, United Kingdom
Computer Science – Exchange Program | September 2022 – July 2023
Grades: Class 2 division 1 honours (Class 2.1)

Peruvian University of Applied Sciences (UPC), Perú
Software Engineering - Double grade | March 2020 – December 2026
Expected Grades: 18 (20 max.) – Tenth higher.

National University of Engineering (UNI), Perú
Mathematics | August 2015 - December 2019
4 years of studies
